Summary

Motivated and detail-oriented B.Tech graduate in Artificial Intelligence and Data Science with strong knowledge of SQL, Python, Excel, Machine Learning, Deep Learning. Passionate about analyzing data, building models, and solving real-world problems. Seeking an entry level opportunity to apply my technical skills and grow in the data field.

Skills

Programming: Python, SQL

Data Visualization Tools: Matplotlib, Seaborn

Data Handling: Pandas, NumPy, Excel

Machine Learning: Regression, Classification, Clustering

Deep Learning: Neural Networks

Version Control & Tools: Git, GitHub, Jupyter Notebook, VS Code

Analytical Abilities: Data Cleaning, Exploratory Data Analysis (EDA), Insights Generation, Descriptive Statistics

Experience

Data Science Intern | May 2026 – Present

Ramanasoft – IT Company, Hyderabad

- Analyzed real-world business datasets using **Python, Pandas, NumPy, Matplotlib, and Seaborn** to perform data cleaning, preprocessing, EDA, and identify meaningful trends and patterns.
- Developed **Machine Learning and Deep Learning solutions** for business-oriented prediction and classification problems, including feature engineering, model training, and performance evaluation.
- Used **Scikit-learn and TensorFlow/Keras** to build and evaluate ML/DL models, applying appropriate metrics to improve model performance and support data-driven decision-making.

Projects

Titanic Survival Prediction — Python, Scikit-learn, Streamlit, SQLite, GitHub

- Developed a machine learning classification model using Gradient Boosting Classifier to predict passenger survival based on demographic and travel information, achieving 82% accuracy.
- Implemented prediction history, model performance monitoring, and SQLite database integration in a Streamlit web application.

Housing Price Prediction — Python, Scikit-learn, Streamlit, SQLite, GitHub

- Developed a machine learning regression application using Gradient Boosting Regressor to predict housing prices from user-provided property features, achieving an R^2 score of 0.63.
- Built an interactive Streamlit application with data preprocessing, model deployment, and real-time price prediction.

Customer Segmentation using K-Means Clustering — Python, Scikit-learn, Streamlit, SQLite, GitHub

- Developed an unsupervised machine learning application using K-Means Clustering to segment customers from uploaded CSV datasets based on selected features, achieving a Silhouette Score of 0.48.
- Implemented the Elbow Method, Silhouette Analysis, interactive cluster visualization, and clustering history monitoring using Streamlit.

Certifications

- Microsoft Certified: Azure Data Fundamentals (DP-900), Microsoft – Aug 2025
- IBM Python for Data Science Certificate

Education

B.Tech – Artificial Intelligence and Data Science

Priyadarshini College Of Engineering, Nagpur, India

Aug 2021 – May 2025

CGPA:8.3
